Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 3-7 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/568,457. Although the conflicting claims are not identical, they are not patentably distinct from each other, because apart from broadening the scope of claim 1 of 10/568,457, instant claims 1 and 3-7 differ only by specifying that steam is introduced into the external circulation path downstream of the blower, a circular pipe for the external circulation path, a centrifugal fan and a DC fan motor. However, a circular pipe and introducing steam downstream of the blower are both conventional, and commended respectively by the availability of such piping and the maximum air speed and therefore vacuum suction strength downstream of a blower.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. 5802963.

Referring to Figs. 1-3 and col. 5, line 8, through col. 6, line 44, US'963 discloses a steam oven as claimed, including an external circulation path 19 with a blowhole 15 from which gas flows to strike the foods in the chamber, a centrifugal fan 20, and a steam ejector 34 downstream of the fan.

Art Unit: 3742

Claim Rejections - 35 USC § 103

Claims 3 and 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'963.

While US'963 does not explicitly disclose a circular pipe for the external circulation path and a DC fan motor, these features do not patentably distinguish the claimed invention from the prior art. It would have been obvious to utilize a circular pipe by reason of its prefabricated availability and resulting economy of manufacturing costs, and to utilize a DC motor depending strictly on the environment in which it is intended to be used, i.e., whether DC is readily available and the electromagnetic emissions of AC are undesirable.

Allowable Subject Matter

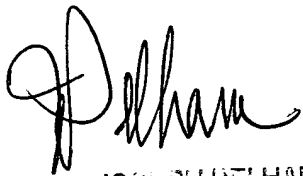

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
